

**AQUA  
SHIELD**

## **LEATHER AND TEXTILE APPLICATION DIRECTIONS**

AquaShield Leather and Textile is a water based hydrophobic self assembling mono layer treatment for water absorptive leather, fabric, textiles and suede. The treated surface is guarded against contamination from dirt, dust and atmospheric pollution. Dirt can be removed easy by rain or by rinsing with clean water by the use of a mild cleaner. On external surfaces, moss and algae formation is significantly reduced.

Unlike many other products it does not contain any mineral spirits or other environmentally unfriendly solvents.

Drying time is the same as with water. Is unsuitable for fabric and textile material that is already coated with a water repellent product.

### **Application Directions**

The surface must be clean, dry and free of dirt, dust, contaminants, stains and coatings. Standard surface preparation can be used. The substrate must be dry before the application. It is important to apply a significant amount to the substrate. Two coats wet on wet should be applied. Consumption rate guideline is between 100 - 200 ml / m<sup>2</sup> .

The product will penetrate slowly and completely into the fibers. The coating needs to have the possibility to dry completely prior to use. Wait 24 hrs for complete drying.

### **Precautions and Storage**

Keep solution away from children. Avoid contact with eyes. In case of eye contact with the product, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Please refer to the MSDS and the Technical Data Sheet available for AquaShield Leather and Textile.

Product must be stored in cool dry place. Please use within 12 months after opening.
